YOUR LOCAL WINTER SERVICES EXPERTS

Winter Grit LTD provides a contractor-run, winter maintenance service. Available to commercial sites in the Nottinghamshire, South Yorkshire, and Derbyshire areas. our comprehensive winter package is designed to keep your premises safe and accessible throughout the winter season.

App Based Log System

Clients are able to view a report of every service, generated from our dedicated app. Vehicle & personnel tracking provides you with a coverage map to ensure all areas have been covered.

Ground & weather conditions at the time of service, site photographs & notes are logged by the on-site operator filing the report.

The reports we provide, are a great way for business to demonstrate the duty of care provided to staff, and members of the public whilst on site, in winter conditions.

RST Service Trigger

We use a forecasting system to predict the RST (Road Surface Temperature).

Once sites reach 0° it will be scheduled for a gritting service between the hours of 1800 - 0600 so as to not interrupt operations on site.

Clients can specify their own temperature trigger for the site, once the trigger is forecast, a service will be scheduled, and client notified.

Snow Clearance

With a fleet of tractors and trucks equipped for ploughing, we are able to continue to operate during times of inclement weather.

This means your site can be kept operational and safe.

Grit Bin Filling Service

Our Grit Bin Filling Service streamlines winter readiness.

We provide and fill on-site grit bins through seasonal hire agreements, sparing you from unnecessary clutter during summer.

Large Scale Gritting & Mechanical Snow Clearance

With our wide range of trucks, tractors & 4x4s we have the capacity to cover all sites, no matter how big or small.

Using a combination of mounted and trailed spreaders we can assign a particular vehicle to your site to ensure it receives the correct level of service. Snow clearance is tackled with the use of tractors and 4WD vehicles. We only use dedicated snow ploughs, to avoid the risk of damaging hidden objects and surfaces.

Pedestrian Gritting & Snow Clearance

We take pride in hand gritting hard-to-reach areas such as stairways, footpaths & emergency exits. Larger sites can opt for an ATV equipped for towing a spreader, improving the efficiency and uniformity when servicing footpaths. We're able to clear pedestrian walkways with the use of pedestrian ploughs, petrol walk behind snow blowers, and quad bike mounted snow ploughs.

Brine Application

Some sites require the need for brine applications. This can be beneficial for a number of reasons such as high footfall areas and specialist areas such as Helipads. By using Brine you can reduce the salt transfer from outside to inside where footfall is high. Keeping the internal areas clean.

Brine applications are becoming more common, and they hold a number of benefits compared to regular granular salt spreading. We are happy to provide this service where required and can discuss the pros and cons if applicable on-site.
